                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         44626,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 471, Application US/08859998

Patent No. 5994076

GENERAL INFORMATION

GENERAL INFORMATION

APPLICANT: Chenchik, Alex

APPLICANT: Uokhadze, George

APPLICANT: Bibilashvilli, Robert

TITLE OF INVENTION: METHOD OF ASSAYING DIFFERENTIAL

TITLE OF INVENTION: EXPRESSION

NUMBER OF SEQUENCES: 1375

CORRESPONDENCE ADDRESS:

ADDRESSEE: Fish & Richardson, P.C.

STREET: 2200 Sand Hill Road, Suite 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 5.0%; Score 50; DB 3; Le Best Local Similarity 100.0%; Pred. No. 3.3e-05; Matches 50; Conservative 0; Mismatches 0;
TITLE OF INVENTION: CHRONIC INFLAMMATORY DISEASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER: Diskette

Sequence 5, Application US/08070158

Sequence 5, Application US/08070158

Patent No. 5677163:

GENERAL INFORMATION:

APPLICANT: DE BOER, MARK

APPLICANT: CONROY, LEAH B.

TITLE OF INVENTION: WEING ANTI-CD40 MONOCLONAL ANTIBODIES

NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:

ADDRESSEE: CHINON CORPORATION

STREET: 4560 Horton Street, R-440

CITY: Emeryville

COUNTRY: USA
                                       GENERAL INFORMATION:
APPLICANT: de Boer, Mark
APPLICANT: conroy, Lean B.
TITLE OF INVENTION: A Method for Generation of Antibodies to
TITLE OF INVENTION: Cell Surface Molecules
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                 Sequence 7, Application US/08200716

Patent No. 5747034

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Conroy, Leah B.

TITLE OF INVENTION: Methods and Materials for Induction

TITLE OF INVENTION: Of T Cell Anergy

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:

ADDRESSEE: Chiron Corporation

STREET: 4560 Horton Street, R-440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 32;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 5, Application US/08015147
| Patent No. 5869050
| GENERAL INFORMATION:
| APPLICANT: de Boer, Mark
| APPLICANT: Conroy, Leah B.
| TITLE OF INVENTION: Methods of Blocking T-Cell
| TITLE OF INVENTION: Activation Using TITLE OF INVENTION: Anti-B7 Monoclonal Antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ZIP: 94608

Sequence 5, Application US/08469015

Patent No. 6004552

GENERAL INFORMATION:

APPLICANT: DE BOER, MARK

APPLICANT: CONROY, LEAH B.

TITLE OF INVENTION: WETHODS OF BLOCKING B-CELL ACTIVATION

TITLE OF INVENTION: USING ANTI-CD40 MONOCLONAL ANTIBODIES

NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:

ADDRESSEE: CHIRON CORPORATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 32;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Indels

TITLE OF INVENTION: BIOINFORMATICALLY DETECTABLE GROUP OF NOVEL REGULATORY
TITLE OF INVENTION: OLIGONUCLEOTIDES ASSOCIATED WITH ALZHEIMER'S DISEASE AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: 55.033
CURRENT APPLICATION NUMBER: US/10/708,204
CURRENT FILING DATE: 2004-02-16
NUMBER OF SEQ ID NOS: 7351
SOFTWARE: Patentin version 3.2
SEQ ID NO 5523
LENGTH: 27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 5539, Application US/10708204

Sequence 46830, Application US/20050272080A1

GENERAL INFORMATION:

APPLICANT: John Palma

TITLE OF INVENTION: Methods of Genetic Analysis of Formalin Fixed Paraffin Embedded S

TITLE OF INVENTION: Microarrays

FILE REFERENCE: 3684.1

CURRENT APPLICATION NUMBER: US/11/121,849

CURRENT APPLICATION NUMBER: 60/567,949

PRIOR APPLICATION NUMBER: 60/567,949

PRIOR FILING DATE: 2004-05-03

NUMBER OF SEQ ID NOS: 673904

SOFTWARE: Microarray Probe Sequence Listing Generator V 1.1

SEQ ID NO 46830

LENGTH: 25

TYPE: DNA

ORGANISM: Home sapien
TITLE OF INVENTION: Methods of Genetic Analysis of Formalin Fixed Paraffin Embedded stitle Reference: 3684.

FILE REFERENCE: 3684.

CURRENT APPLICATION NUMBER: US/11/121,849

CURRENT FILING DATE: 2005-05-03

PRIOR APPLICATION NUMBER: 60/567,949

PRIOR RILING DATE: 2004-05-03

NUMBER OF SEQ ID NOS: 673904

SQOTWARR: Microarray Probe Sequence Listing Generator V 1.1

SQOTUMENT: 25
